

THE UNIVERSITY
OF BRITISH COLUMBIA

UBC PEDIATRIC UROLOGY FELLOWSHIP

The Division of Pediatric Urology, UBC Department of Urologic Sciences, is accepting applications for a one- or two-year Fellowship at British Columbia Children's Hospital starting July 1st, 2021. BC Children's Hospital is the only tertiary pediatric center in the Province of British Columbia serving a population of 4.7 million. The successful candidate will have the opportunity to work with four fellowship trained pediatric urologists who perform over 600 surgeries per year and see 6000 patients annually in the outpatient clinics. The fellowship program encompasses training in all aspects of pediatric urological surgeries including complex urinary reconstruction, renal transplant, MIS and robotics. Outpatient urology and multidisciplinary clinics ensure high levels of exposure to a wide range of pathologies such as disorders of sexual differentiation and neurogenic bladder. The first year of Fellowship includes mandatory clinical research involvement.

The second year of Fellowship is optional and dedicated to basic science or clinical research, with a minor clinical component. Basic science research will be supported by state-of-the-art laboratory at Vancouver Prostate Center, Department of Urologic Sciences. Clinical research can be integrated into a variety of Masters Programs offered by The University of British Columbia (e.g. Masters in Clinical Epidemiology, Health Administration or Business Administration.) Clinical research is supported by a full-time research coordinator, as well as BC Children's Hospital Research Institute.

UBC has a fully accredited Urology Residency Program. Pediatric Urology Fellows will be expected to share clinical duties with and participate in teaching of UBC Urology residents and undergraduate medical students.

Please send applications to fellowship program director:

Dr. Kouros Afshar
